- c) Noise dependent Landing fee over 10 t MTOW

For the determination of the assigned bonus/malus group, the individual noise values of the aircraft (expressed in EPNdB) as per the noise certificate and the ICAO noise limit for the respective aircraft are utilized. In this process, the sum of the three maximum permissible noise values according to ICAO Annex 16 Chapter III for 'Lateral/Full-Power, Approach, and Flyover' is subtracted from the sum of the three corresponding values from the noise certificate. If the aircraft's noise certificate is not provided to the aerodrome operator before or at the time of landing, the aircraft will be classified by the aerodrome operator into the lowest (i.e., highest surcharge or lowest deduction) group known for that aircraft type. The resulting difference is referred to as dEPNdB.

Group	dEPNdB	Surcharge/Discount on the Landing Fee
1	0 bis 7 dB	25%
